Let's Start!

Pronunciation Spot: Go green!

Learning Outcome

Describe necessity, duty, advice, or strong disapproval in written and spoken situations according to work and social contexts.

Can Do Statements

- I can talk about solving problems.
- I can describe environmental problems.
- I can express necessity, duty, and advice.

Ask your partner:

- What do you do to help the environment?
- Which environmental issues do you think the next generation of students should be educated on?

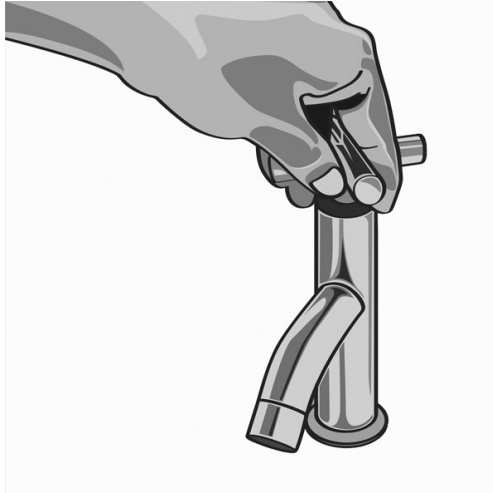

Let's Explore!

What **practices*** does BFP need to **implement****?

* A "practice" is something that should be done.

** To "implement" means to start to use.

Instructions: Read the text aloud.

We must look for ways to reduce our environmental footprint and go greener—not just at home, but here at work as well. We need to make small changes at our workplace so we can help protect our environment. If we implement environmentally friendly practices in our office, we can all make a difference.

This year, office equipment will have accounted for a large portion of the energy used in our office — in fact, more than 50% of it. So, if you won't be using your computer screen, turn it off. Computer screens are the biggest users, consuming 10% of the total energy. This happens even when they are on standby. We must reduce our energy consumption. This will save energy, make our office more environmentally friendly, and more cost-friendly. Our paper consumption is also continuing to rise. We needn't waste so much. How much paper do you think you will have used by the end of a month? The average is about 1,000 sheets per person. We must cut back. We need to significantly decrease our solid waste.

Also, all greenhouse gas emissions need to be reduced. Because electricity generation is a major source of greenhouse gases, reducing the amount of electricity used is the place to start.

Do you leave the water running when you're washing your plate at lunch, or do you turn the tap off? Water is a precious resource. That demand for water is constantly growing. We need to be mindful when using it. We must help conserve our water.

We mustn't allow ourselves to be apathetic! We can make a difference by taking simple steps to be more environmentally friendly. It's the little actions we take that will have added up to big results in the long run. By getting involved, we can all make real impact!

Let's Practice!

BFP tries to be more environmentally aware.

Instructions: Read the sentences aloud. Check your pronunciation with your instructor.

1. We must look for ways to reduce our environmental footprint and go greener—not just at home, but at the office as well.
2. Energy is used to light, heat and air condition a typical workplace and for running electrical equipment like computers, photocopiers and printers.
3. Screens are the biggest consumers of energy, using 10% of the total energy consumed by the computer ... even when on standby.
4. We will save energy and make our office more environmentally friendly—and more cost-friendly.
5. Do you leave the water running when you're washing your plate at lunch, or do you turn the tap off?

Let's Practice!

BFP should take the necessary steps to help the environment.

Instructions: Use the words from the word bank to correctly complete the sentences. Read the sentences aloud. Check your pronunciation with your instructor.

Word Bank

must cut / need to make / mustn't leave / needn't waste / must reduce

1. We _____ small changes at the office so we can help protect our environment.
2. If you won't be using your computer screen, you _____ it on.
3. We _____ our energy consumption.
4. We _____ anymore.
5. We _____ back on our unnecessary paper use. We need to significantly decrease our solid waste.

Extension Activity

Write a brochure giving suggestions on actions each individual can take to help improve the environment.

Instructions: Complete the following steps. Fill in the Self-Assessment.

- With a partner, discuss environmental problems in your city.
- Discuss the things an individual can do to help solve those problems.
- Go online. Find more things each person can do.
- Write a paragraph for a brochure giving suggestions for individual actions. Use your own words.
- Add pictures or illustrations to make a brochure.
- Read your paragraph to a partner.

Self-Assessment

Yes **No**

I discuss environmental issues.

☐ ☐

I identify personal actions to help solve problems.

☐ ☐

I write a paragraph giving suggestions.

☐ ☐

I read my paragraph to a partner.

☐ ☐

Target Words

- environmental footprint** (noun): the effect that a person, a company or an activity has on the environment
e.g. We must look for ways to reduce our environmental footprint.
- to go green** (verb): to take actions to protect the environment
e.g. We must go greener—not just at home, but at the office as well.
- to account for** (verb): to form the total of something
e.g. This year office equipment will have accounted for a large portion of the energy used in our office!
- energy consumption** (noun): the amount of energy that is used
e.g. We must reduce our energy consumption.
- greenhouse gas** (noun): gas that is believed to trap heat above the Earth and cause the greenhouse effect
e.g. Because electricity generation is a major source of greenhouse gases, reducing the amount of electricity we use is a place to start.
- emission** (noun): a gas that is sent into the air
e.g. Also all greenhouse gas emissions must be reduced!
- electricity generation** (noun): the production of energy in an electrical form
e.g. Electricity generation is a major source of greenhouse gases.

Learning Points

Intonation with Lists, Choice Questions, and Non-final Thought Groups

Intonation is the rise and fall of your voice. There are definite and expected intonation patterns in English. The more you practice listening to and saying the correct intonation patterns, the better you will understand and be understood.

When naming items in a list you use **rising** intonation for all the items in the list except the last item. You use **falling** intonation for the last item because falling intonation indicates that the list is finished.

For example:

I follow the three Rs. I recycle ↗, reduce ↗, and reuse ↘.

The rising intonation indicates to the listener that you are not finished and that there are other items in the list.

All *choice questions* have an 'or' in them and cannot be answered with yes or no. These questions offer a choice between one option or the other.

For example:

*Did you **recycle that** ↗ or just **throw it in the trash** ↘?*

A thought group refers to a coherent unit of speech that forms a whole. You normally separate a long sentence into several thought groups. Non-final thought groups represent all the thought groups that you say before the last thought group of a sentence. The final thought group is the thought group that ends a sentence. You stress non-final thought groups with a normal-rising-normal pattern.

For example:

Paper consumption continues to rise ... a typical office will use approximately 1,000 sheets of paper ... per month ... per person.

Read the following sentences, keeping in mind the different intonation patterns you use:

Examples:

- *It takes a large amount of energy to light, heat and cool a workplace.*
- *Do you recycle scrap paper or toss it aside in the trash?*
- *We must look for ways to reduce our environmental footprint and become greener—not just at home, but here at work as well.*
