Let's Start!

What does good lighting have to do with it?

Learning Outcome

Analyze issues relating to different topics and their solution in written and spoken situations according to work and social contexts.

Can Do Statements

- I can explain workplace health procedures.
- I can express necessity, duty, and advice.
- I can ask someone to do something.

Ask your partner:

- Do you think having enough light in a room when doing work is important?
- How is lighting connected to our health?

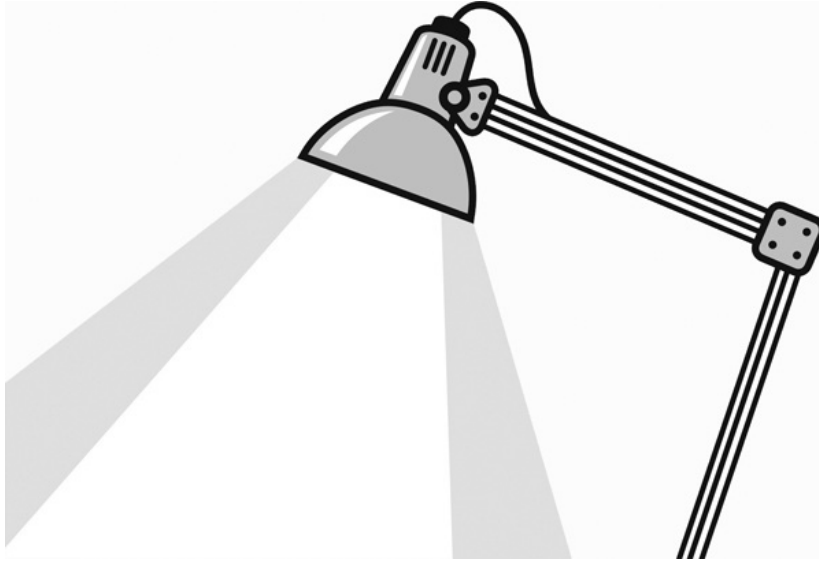

Let's Explore!

What's in your **viewing field***?

* Your "viewing field" refers to all the things you can see.

Instructions: Read the text aloud.

In any workplace, good lighting is more than important, it is essential. Lighting should allow people to see clearly so they can work safely. Things we ought to consider when deciding on the adequacy of lighting are:

- how much light there is in an area
- how many lights there are, the type of lights and where they are placed
- what work activities are performed in the area

If an area is well-lit, employees should easily be able to see both their work and work environment. If they need to strain their eyes to see, then it's time to have the lighting upgraded. It's important to remember that not all activities require the same level or quality of light. Have someone look at the tasks performed in an area to determine the lighting needs. An activity not requiring high visual acuity shouldn't require optimum quality or level of lighting. However, drawing, document checking, and other fine detailed work requiring more than moderate work with your eyes does.

Since our eyes adapt quickly to lighting conditions, we see well in most lighting levels. When you walk from a bright room into a darker one, your eyes allow you to see clearly in the new light level within a few seconds. Getting lights installed in the workplace that reduce demands on the eyes when people are moving from area to area is the best scenario. By having lighting installed to address this, you are helping your employees work in a brighter, safer environment.

Let's Practice!

Boris talks about what needs to get done.

Instructions: Underline all the modal verbs that express necessity in the sentence.

1. Lighting should enable people to see clearly and perform their work safely.
2. They shouldn't require greater levels of light than needed.
3. Activities that do not require a high level of visual acuity shouldn't require high levels or an optimum quality of light.
4. We ought to consider these factors when determining the adequacy of lighting.
5. Should we increase the level of lighting in here?

Let's Practice!

The importance of good lighting cannot be overlooked.

Instructions: Use the words from the word bank to correctly complete the sentences. Read the sentences aloud. Check your pronunciation with your instructor.

Word Bank

moderate / adequacy / optimum / visual acuity / to strain

1. These are key factors we ought to consider when determining the _____ of the lighting.
2. Good lighting should enable employees to easily view their work and environment without the need _____ their eyes.
3. Activities that do not require a high level of _____ shouldn't require high levels of lighting.
4. An _____ quality of light is required when doing this.
5. These require a _____ to high level of work for you eyes.

Extension Activity

Find fun facts about light and lighting as they relate to work.

Instructions: Complete the following steps. Fill in the Self-Assessment.

- With a partner, discuss the lighting in your school or workplace.
- Discuss what types of workplaces require more lighting and which workplaces require less lighting.
- Go online. Find some interesting facts about lighting. Try to find facts that connect lighting with work, such as rates of productivity or employee satisfaction.
- Write down 5 interesting facts about lighting in workplaces. Try to use your own words.
- Read your facts to your partner.

Self-Assessment

Yes No

I discuss the topic of lighting in schools and workplaces.

☐ ☐

I identify issues related to lighting in workplaces.

☐ ☐

I write information about lighting.

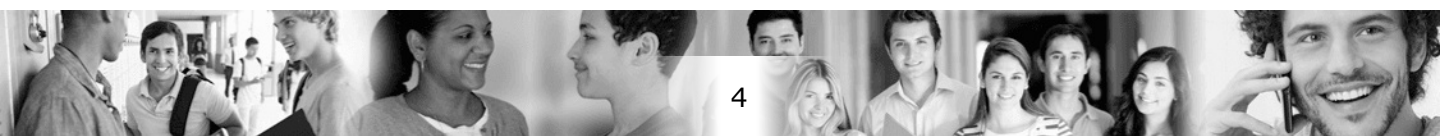

☐ ☐

I read the information to a partner.

☐ ☐

Target Words

- adequacy** (noun): the quality of being good enough for a particular purpose
e.g. These are the things we ought to consider when deciding on the adequacy of lighting in the workplace.
- to strain** (verb): to injure a muscle or part of your body that is caused by using it too much
e.g. If they need to strain their eyes to see, then it's time to have the lighting upgraded.
- visual acuity** (noun): the sharpness of your vision, measured by the ability to identify letters or numbers at a given distance
e.g. An activity not requiring high visual acuity shouldn't require high level lighting.
- optimum** (adjective): the most suitable for a particular purpose
e.g. An optimum quality of light is required when doing this.
- moderate** (adjective): not very low or very high
e.g. Drawing, document checking, and other fine detailed work requiring more than moderate work with your eyes need good lighting.
- to adapt** (verb): to change something to make it suitable for a different purpose
e.g. Since our eyes adapt quickly to lighting conditions, we see well in most lighting levels.
- demands** (noun): the difficult things that you have to do
e.g. Getting lights installed in the workplace that reduce demands on the eyes when people are moving from area to area is the best scenario.

Learning Points

Causative Get and Have: Get + -ed: Active and Passive

You use **get** and **have** in both active and passive structures.

The **active** pattern conveys the meaning of 'cause or order someone to do something'. The form is:

get + person + to - infinitive OR

have + person + infinitive without *to*

For example:

*I'll **get** the secretary **to put** in an order.*

*I'll **have** the secretary **put** in an order.*

The **passive** pattern conveys the meaning of 'arrange somebody else to do something'. The form is:

get/have + object + past participle

For example:

*I will **have/get** my car fixed.*

In this case, it means that somebody else will fix the car.

Examples:

- *Getting lights installed in the workplace that reduce demands on the eyes when people are moving from area to area is the best scenario.*
- *By having lighting installed to address this, you are helping your employees work in a brighter, safer environment.*
- *Have someone look at the tasks performed in an area to determine the lighting needs.*
- *If they need to strain their eyes to see, then it's time to have the lighting upgraded.*
- *Boris has given me the green light to proceed with this.*
- *I had to get new bulbs shipped to the office.*

Learning Points

Using the Modals Shall, Ought to and Should to Ask For Advice

You use the modals **should** and **ought to** to express your opinion about what is right and what is wrong.

When you give advice, you are telling someone what you think is the right thing to do in a certain situation.

The most common modal for giving advice is **should**.

For example:

*You really **shouldn't** be working so hard - you'll get sick!*

*You **should** get some rest over the weekend.*

You can use **ought to** in the same sort of situations, but it sounds much more formal.

For example:

*You **ought to** get some rest over the weekend.*

You can use **shall** to ask for advice.

For example:

*What **shall** I do?*

Again, this sounds quite formal.

Examples:

- *Lighting **should** allow people to see clearly so they can work safely.*
- *They **shouldn't** require greater levels of light than needed.*
- *An activity not requiring high visual acuity **shouldn't** require optimum quality or level of lighting.*
- *These are the things we **ought to** consider when deciding on the adequacy of lighting in the workplace.*
- ***Shall** we increase the level of lighting in here?*
